### Install Coding Agent Plugin

Turn your coding agent into a Vercel expert. Simply copy and run this in your terminal to install the plugin. Available for Claude, Cursor and Codex.

```
$ npx plugins add vercel/vercel-plugin
```

### Next Steps

#### Instant Previews

Push a new branch to preview changes instantly

#### Add Domain

Add a custom domain to your project

#### Enable Speed Insights

Track how users experience your site over time

Vercel Drop

Deployment Settings

Recommendations

Build Multiple Deployments  
Simultaneously

Never wait for a queued build.

Prevent Frontend-Backend Mismatches

Automatically sync client and server  
versions to avoid deployment conflicts.

Find a Custom Domain

Purchase a domain. Fast, at-cost & private.

Transfer

### Pause Project

Temporarily stop serving your Production Deployment so the project stops using metered resources. You can resume it at any time.

Preview Deployments, settings, and data are unaffected.

[Learn more about pausing projects](#)

Pause Project

### Delete Project

Permanently delete this project and all deployments, domains, environment variables, serverless functions, and settings.
